Serial No. 10/781,820
Docket No. H64-163097/TMN (NGB.365)

2

AMENDMENTS TO THE CLAIMS

Please amend the claims as follows:

1. (Currently Amended) A belt unit of an electrophotographic printing apparatus, comprising:
two rollers for supporting a belt so as to be substantially in parallel with each other;
two frames for supporting the rollers and attached to opposite ends of one of the rollers
respectively so as to be perpendicular to the rollers;
two support members attached to opposite ends of the other roller so as to be perpendicular
to the rollers;
two elastic members interposed between the two support members and the two frames
respectively; and
a belt mounting guide provided between the two frames;
wherein the belt mounting guide includes a rotating shaft disposed in parallel with the two
rollers, and an edge portion disposed along a length of the rotating shaft, the edge portion being
inclined relative to an axial direction of the rotating shaft, and
wherein the rotating shaft of the belt mounting guide is provided with a blade for cleaning a
back surface of the belt.
2. (Original) The belt unit of an electrophotographic printing apparatus according to claim 1,
wherein a step portion is provided at one end of the edge portion of the belt mounting guide and in
a position where the belt travels normally.
3. (Original) The belt unit of an electrophotographic printing apparatus according to claim 1,
wherein when the belt is mounted, the belt mounting guide is located to be higher than a frame that
forms a slot portion included in an apparatus body in which the belt unit is mounted.
4. (Canceled)
5. (Currently Amended) An electrophotographic printing apparatus, comprising:
an apparatus body; and a belt unit installed in the apparatus body;
wherein the belt unit includes:

3

Docket No. H64-163097/TMN (NGB.365)

a belt, two rollers for supporting the belt so as to be substantially in parallel with each other, two frames for supporting the rollers and attached to opposite ends of one of the rollers respectively so as to be perpendicular to the rollers, two support members attached to opposite ends of the other roller so as to be perpendicular to the rollers, two elastic members interposed between the two support members and the two frames respectively, and a belt mounting guide provided between the two frames; and the belt mounting guide includes a rotating shaft disposed in parallel with the two rollers, and an edge portion disposed along a length of the rotating shaft, the edge portion being inclined relative to an axial direction of the rotating shaft; and

wherein the rotating shaft of the belt mounting guide is provided with a blade for cleaning a back surface of the belt.

6. (Canceled)

7. (Previously Presented) The belt unit of an electrophotographic printing apparatus according to claim 1, wherein the belt mounting guide is rotatably mounted to the two frames.

8. (Currently Amended) ~~The belt unit of an electrophotographic printing apparatus according to claim 1,~~ A belt unit of an electrophotographic printing apparatus, comprising:

two rollers for supporting a belt so as to be substantially in parallel with each other;

two frames for supporting the rollers and attached to opposite ends of one of the rollers respectively so as to be perpendicular to the rollers;

two support members attached to opposite ends of the other roller so as to be perpendicular to the rollers;

two elastic members interposed between the two support members and the two frames respectively; and

a belt mounting guide provided between the two frames;

wherein the belt mounting guide includes a rotating shaft disposed in parallel with the two rollers, and an edge portion disposed along a length of the rotating shaft, the edge portion being inclined relative to an axial direction of the rotating shaft, and wherein the rotating shaft includes a lever to rotate the belt mounting guide to a desired position.

9. (Previously Presented) The belt unit of an electrophotographic printing apparatus according to claim 1, wherein the belt mounting guide is disposed between the two rollers.

Serial No. 10/781,820

4

Docket No. H64-163097/TMN (NGB.365)

10. (Currently Amended) ~~The belt unit of an electrophotographic printing apparatus according to claim 1.~~ A belt unit of an electrophotographic printing apparatus, comprising:

two rollers for supporting a belt so as to be substantially in parallel with each other;
two frames for supporting the rollers and attached to opposite ends of one of the rollers respectively so as to be perpendicular to the rollers;
two support members attached to opposite ends of the other roller so as to be perpendicular to the rollers;
two elastic members interposed between the two support members and the two frames respectively; and
a belt mounting guide provided between the two frames;
wherein the belt mounting guide includes a rotating shaft disposed in parallel with the two rollers, and an edge portion disposed along a length of the rotating shaft, the edge portion being inclined relative to an axial direction of the rotating shaft,
wherein the two rollers comprise a drive roller and a tension roller, roller,
further comprising a rotatable shaft disposed between the two frames, the rotatable shaft having an eccentric cam disposed at opposite ends thereof.

11. (Canceled)

12. (Currently Amended) The belt unit of an electrophotographic printing apparatus according to ~~claim 11~~ claim 10, wherein the eccentric cam is connected to the tension roller.

13. (Currently Amended) The belt unit of an electrophotographic printing apparatus according to ~~claim 11~~ claim 10, wherein the rotatable shaft includes a lever that rotates the rotatable shaft to a desired position.

14. (Currently Amended) The belt unit of an electrophotographic printing apparatus according to claim 12, wherein the rotatable shaft includes a lever that rotates the eccentric cam to place tension on the tension roller.

15. (Currently Amended) A belt mounting guide for a belt unit of an electrophotographic printing apparatus, comprising:

a rotating shaft being positionable in parallel between rollers of the belt unit;
a blade for cleaning a back surface of a belt; and

5

an edge portion disposed along a length of the rotating shaft, the edge portion being inclined relative to an axial direction of the rotating shaft.

16. (Previously Presented) The belt mounting guide for a belt unit of an electrophotographic printing apparatus, according to claim 15, wherein the rotating shaft is positionable between parallel frame members of the belt unit.

17. (Previously Presented) The belt mounting guide for a belt unit of an electrophotographic printing apparatus, according to claim 16, wherein the belt mounting guide is positionable at a location higher than the parallel frame members.

18. (Canceled)

19. (Previously Presented) The belt mounting guide for a belt unit of an electrophotographic printing apparatus, according to claim 16, wherein the belt mounting guide is rotatable between the parallel frame members.

20. (Previously Presented) The belt mounting guide for a belt unit of an electrophotographic printing apparatus, according to claim 15, further comprising a step portion at one end of the edge portion to receive a belt.

21. (New) The belt unit of an electrophotographic printing apparatus according to claim 8, wherein a step portion is provided at one end of the edge portion of the belt mounting guide and in a position where the belt travels normally.

22. (New) The belt unit of an electrophotographic printing apparatus according to claim 8, wherein when the belt is mounted, the belt mounting guide is located to be higher than a frame that forms a slot portion included in an apparatus body in which the belt unit is mounted.

23. (New) The belt unit of an electrophotographic printing apparatus according to claim 8, wherein the belt mounting guide is rotatably mounted to the two frames.

24. (New) The belt unit of an electrophotographic printing apparatus according to claim 8, wherein the belt mounting guide is disposed between the two rollers.
